

Are you the caregiver for a child 0 – 6 years old and have questions about access to dental care?

Share your experience and give input to design better health programs!

Community Engagement Studios give people in the community the opportunity to provide feedback on health studies and programs. A researcher gives a brief and simple 10-minute presentation describing the study/project and poses specific questions for feedback. A facilitator guides the group discussion for the remaining time.

DATE/TIME: Thursday, March 17 from 9:00AM-10:30AM or 6:00PM-7:30PM
– (your availability will help inform the final time chosen)

TOPIC: Dental care early in a child's life can help make sure teeth are as healthy as possible. Researchers are looking at the best ways to make sure there is easy, fast access to dental care, even from someone's own home.

UR Investigator(s): Dr. Jin Xiao

Investigator requests community input regarding:

- How interested would you be in access to technology for at home dental visits?
- What would keep you from participating in research about access to dental care?

Needed:

- 8-10 people who are parents, guardians, and/or caregivers of children 0-6 years old.
- Community health workers also welcome.
- The Studio will be held virtually, so preferably (but not required) participants will have access to a computer, including webcam.

Note:

- People who participate will receive **compensation of \$50!**
- Limited seating; **first come, first serve.**

If you are available and are interested in providing feedback on this project, please contact us by Thursday, March 10.

Carolyn Settle via email (carolyn_settle@urmc.rochester.edu) or by phone (585) 602-0813.

Community Engagement Studios are offered in partnership with the Center for Community Health & Prevention at URM.
